EDUCATION

Michigan State University

Aug. 2015 - Aug. 2020

Ph.D. in Computer Science & Engineering

Advisor: Dr. Jiayu Zhou

University of Science and Technology of China

Sept. 2010 - July 2014

B.E. in Electronic Information Engineering

PROFESSIONAL EXPERIENCE

Senior Applied Scientist at **Amazon AGI, Sunnyvale, CA**

Feb 2024 - present

- Multimodal RLHF. Core contributor to Amazon Nova Models. Improved multimodal benchmark performance and reduced large-scale redundant multimodal production training data. Proposed and implemented reward normalization to stabilize RL production training, Proposed and implemented constrained reward modeling to restrict reward score range without sacrificing of performance both theoretically and empirically.
- RLAIIF. Proposed and implemented RLAIIF algorithm to improve Agent performance by 10% on internal benchmark.
- MultiModal Agents. We released the best OSS multimodal web agents (PAE) on open-ended web environments as of 2024, advancing open-source model performance by 10%. On the same model size, we boost the OSS performance from 2% to 33%.
- Long-horizon reasoning. We reveal that all SoTA LLMs (Claude3.5 Sonnet, Gemini1.5 Pro, OpenAI O1-preview) cannot recognize and adhere to user preference, especially in long horizon setting.

Senior Applied Scientist at **Amazon web service, Santa Clara, CA**

Oct 25th 2021 - Jan 2024

Post-training, Pre-training, and contrastive learning of foundation models.

- Initiated and led Amazon Titan models RLHF (Reinforcement Learning from Human Feedback) efforts. Align large language model with human preference across various complicated scenarios at industry scale.
 1. Leading the effort of training large-scale RLHF models. We built up Amazon RLHF pipeline from scratch, trained industry-scale RLHF models, and launched RLHF models in production.
 2. Proposed RLHF approach to improve both human preference alignment and standard NLP benchmark performance, which reduces the performance degradation when using PPO and PPO-PTX.
- Proposed and developed SOTA contrastive learning algorithm for text embedding models. Trained (pre-training and contrastive learning) text embedding models from scratch that achieved SOTA performance (outperforming OpenAI, Cohere, and all public models). It was the best text embedding model as of Nov, 2022 across text similarity and retrieval tasks. It was launched as beta version of Amazon Titan embedding.

Applied Scientist II at **Amazon Lab 126, Sunnyvale, CA**

Oct 5th 2020 - Oct 25th 2021

- Embodied Artificial Intelligence. Build infrastructure and model for embodied agents that perceive first-person view images, follow human instruction, and complete household tasks in the simulated environments. It was launched as beta version of Simbot.

Research Intern at **Google Display Ads, Mountain View, CA**

May 28th - Aug. 30th 2019

- Applied learning to rank algorithms (including our ranking policy gradient) to display format selection problems. Seven models checked into production for three ranking tasks.
- Increased revenue by 1.14% based on five days online A/B testing.

Research Intern at **Didi AI Labs, Beijing**

May - Aug. 2017, 2018

- Designed and implemented constrained multi-armed bandit algorithm for a multi-channel marketing project. Return on Investment (ROI) increased over 23% with the same scale of investment. This algorithm was running online at the end of my internship.
- Proposed and implemented a novel multi-agent deep reinforcement learning algorithm for large scale fleet management that is able to coordinate large number of agents and increase the GMV over 15% based on a simulator that is calibrated with real data.

HONORS AND AWARDS

Conference Travel Grant: SDM2016, KDD2016, SDM2017, SDM2018, KDD2018
Best Poster Award, Doctoral Forum, SDM2017

INVITED TALKS

- Guest lecture on Deep Reinforcement Learning at Northeastern CS7150 Deep Learning.
- Invited Talk "Ranking Policy Gradient" at DRL4IR Workshop, SIGIR, July 15th, 2021.
- LinkedIn Tech Talk: "Ranking Policy Gradient: Towards Sample-efficient Reinforcement Learning", Aug 9th, 2019.
